The ProPark Locker Assembly may have **OPTIONAL** items included. These items will have a separate Installation and Assembly Instructions included with the shipment.

---

**ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES**
**INTRODUCTION**

This ProPark Series Installation & Assembly Instruction will detail the tools required, fasteners and components furnished, assembly steps, and optional features, to successfully install the CycleSafe ProPark Bicycle Locker System. WARNING: Exterior storage on the ground under tarps do not adequately protect the locker components. The packaging is not intended for extended storage in exterior locations. Product assembled at a later date needs to be stored indoors or under cover in a temperate dry environment.

---

**PLEASE READ THE INSTRUCTIONS COMPLETELY BEFORE BEGINNING.**

Identify & inventory all parts using the packing list furnished with the shipment and the parts list in this Installation Instruction. Some components may be found in the "Options" section. Be sure to keep the hardware bags & contents separate from each other.

---

**THE LOCKER SITE MUST BE PREPARED AND READY FOR ASSEMBLY BEFORE BEGINNING.**

Reference the ProPark System Planning Manual (WI4.9.028) for Site Preparation and Planning recommendations.

---

**CARPENTRY OR ASSEMBLY SKILLS ARE STRONGLY SUGGESTED**

You will need skills at using powered hand tools, climbing ladders, and squaring the assembled components. The recommended time budget for each 2-Door Locker is 1 to 2 man-hours.

**NOTE:** The heaviest part is 70lbs (31.8kg).

---

**VARIOUS MOUNTING METHODS ARE USED, DEPENDING ON THE FLATNESS OF NEW OR EXISTING CONCRETE OR ASPHALT SURFACES**

Note that the Locker System may be mounted to different base surfaces and alternate methods of locating and anchoring the Lockers are listed. Be sure the site is clean and ready for construction. New concrete or asphalt surfaces must be fully cured.

---

If you have difficulties or require further installation discussion, please contact our Customer Service Experts

Introduction

Tools Required
Supplied by the Contractor

Power Drill Motor w/ Clutch
Hammer Drill Motor
Tape Measure
Carpenter’s pencil
Carpenter’s Square
Carpenter’s Level
Short 10” or 12” Level
Chalk Line
Small Dia Drift Pin
Hex Drive Set
T-40 Star Drive Bit
Small Hand Brush
Shop Vacuum
Bungee cords/rope
Flat & Philips Screwdriver
Slip-joint Plier Set
3/8” Drill Motor Adapter
3/8” Ratchet & Extension
3/8” Drive Deep Well Sockets
3/8” Drill Motor Adapter
Open End Wrench Set
5/16” Twist Drill Bit
3/8” Concrete Drill Bit
Contractor’s Adhesive
Portable Electric Generator
Electrical Extension Cords
2x4s, 24” to 30” Long
hacksaw blade
sm. resealable plastic bags

Fasteners Required

Kit A = End Panel & Anchor Bolts
Kit B = Door, Top & Center Panels
Kit C = Vertical, Horizontal Frames & Divider Partition
Kit I = Interior Door Brace Assembly

Assembly Sequence

A Inspect the Installation Site and Mounting Surface
B Review the Shipment for Damage & Carefully Unpack
C Measure Site and Layout Corners for Anchor Bolts
D Pre-Assemble Major Components.
E Install Anchor Bolts and Leveling Plates on the Mounting Surface or U-Strut
F Install Major Components: End Panels, Frames, Partitions
G Square the Assembly and Fit Top Panels and Doors
H Adjust the Doors, Level the Locker & Attach to the Leveling Plates

NOTE:
Keep the assembly Square and Plumb during the assembly steps.
Special effort must be taken ot record the corresponding Key with Locker Door.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES
WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
Many of the items found in this Installation Instruction are common to the ProPark Series Starter and Adder Lockers. Some items may be reduced or deleted depending on options.

**Basic Components**

1. Top Panel
2. Door
3. End Panel
4. Horizontal Frame
5. Vertical Frame
6. Partition
7. Door Brace

The hardware will be included in separate sealed bags.

**QUICK STEPS:**

1. Lay out the Site
2. Prepare Doors
3. Assemble End Panels
4. Assemble Frames
5. Fit Top Panels
6. Assemble Door Braces
7. Assemble Divider
8. Hang Doors
9. Adjust & Anchor

Lockers may be located individually, joined side by side, top and bottom, or both to create banks of parking. The Lockers may be accessible by one or two doors.

Click Link to watch a 56-second Timelapse Video showing the assembly of (2) 6-Door Locker Banks of CycleSafe ProPark SM (Standard) Series Lockers.
Please read the instructions completely before beginning.

- The Locker Components may be pre-assembled prior to attachment.
- Care should be taken that the components are mounted straight & square.
- Excessive handling may impair the finish of the components.
- Lockers can be combined in multiple configurations.

This Parts List is for a 2-Door Starter Assembly Locker. Multiple Door Assemblies are detailed in following pages.

(1) STARTER UNIT & (2) ADDERS SHOWN

One Starter and Multiple Adders may be combined to create banks of lockers, regardless of Double or Single door access, or Upper Tier Assembly.
Before you Begin!

The Site Preparation is the responsibility of the Purchaser.

Please consult local building codes for pad installation. The mount surface must be cured sufficiently to allow the anchors to be installed. The work area must be clear and dry.

The Top Panel has a Crown and Cannot be Used to Level the Locker.

The locker shall be anchored on a (reasonably) flat & level surface.

The locker may be leveled and fastened during assembly.

The MAXIMUM off-level slope allowed is 1°. The door may not open completely if the slope is too great.

If the slope is too great and the door does not open, the Locker must be raised off the pad using all four leveling plates.

CycleSafe assumes no responsibility for Lockers that are assembled or installed by the Customer NOT in accordance with this Installation Manual.
LAYOUT THE SITE

LAYOUT THE SITE WITH THE SAME DIMENSIONS REGARDLESS OF THE SURFACE MATERIALS OR MOUNTING STYLE.

Single 2-Door Installation

71-5/8" [1819mm]

81-1/16" [2059mm]

104-7/16" [2653mm]

Additional 2-Door Installation

Lay out the anchor bolt pattern using a chalk line. Otherwise, use a pencil for surface marking beyond chalk line use. Be sure to square the dimensions using the diagonal dimension as reference.

38" [965mm]

THE 38" DIMENSION IS CRITICAL AND MUST BE

Start the Locker row assembly at the highest level of the grade and work downhill.

Determine the Severity of the Slope. On future steps it may be preferred to assemble the units first, before installing the leveling plates.

If possible, position the lockers with the slope going from side to side rather than from front door to back door, especially when installing a long bank of lockers.
 Anchor to Concrete

THE SITE PREPARATION MUST ALREADY BE COMPLETED. REFERENCE ProPark SITE PLANNING & PREPARATION MANUAL (WI4.9.028) FOR RECOMMENDED SITE DETAILS.

Click on the Link:
www.cyclesafe.com/home/bike-community-resources/ProPark System Planning Manual (WI4.9.028)

1. Layout and square the bolt pattern as previously shown.
2. When the pattern is square, drill the necessary 3/8” dia [9,5mm] holes- 4” [101mm] deep.
3. Blow the concrete dust from the holes.
4. Place the Leveling Plate (10216) over the hole. Add the Washer (10909) to the Anchor (10211) and insert into the bored hole.
5. Tighten the nut until the Anchor Bolt (10211) and Leveling Plate are 'set'. Repeat for the remaining Anchor Bolts.
6. Loosen the nut on all Anchor Bolts to allow for the adjustment of the Leveling Plate in Step-7.
7. Square the Leveling Plates (10216) starting at one end of the bolt pattern. Center two of the plates on the layout and tighten the nuts. Measure from these two plates and adjust the other plates to EXACTLY 38” [965mm] center to center dimension.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
**Top Panel Assembly**

1. Place the Top Panel (10301) over the "Sill" created by the Horizontal Frames (10202) or End Panels (10960). Make sure there is NO GAP between the Top Panel and End Panel.

2. From inside the Locker, align the Top Panel (10301) with the Partition (10101) and the mounting holes. The Top Panel flanges will align with the Divider Panel.

3. Insert (14) Washer Head Hex Screws (10222) into the Top Panel bosses and tighten.

4. Repeat the steps until all Top Panels are assembled.

**WARNING:**
To avoid damaging the SMC plastic parts, only tighten the fasteners "Wrench Snug". SET TORQUE TO 10lb/ft.

**NOTE:** (2) screws are located at each corner. (3) screws are located along each side of the Top Panel.

**TOOLS REQ:**
1. Power Drill Motor w/ Clutch
2. 3/8" Drive Adapter
3. 1/2" Deep Socket

**ALWAYS OBSERVE POSTED SAFETY GUIDELINES**
WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES.
ATTENTION! Secure internal records should be made of key numbers and the door numbers associated with the key, in case duplication or replacement keys are required.

Before installation, each Door shall be removed from the packaging and the door number badge installed. **IT IS CRITICAL THAT THE DOOR ID NUMBER AND KEY CODE MATCH.** The key code number is found on the metal tag supplied with each key set. **FILL IN THE CHART (found on Appendix-A) WITH DOOR ID & KEY NUMBERS and SUBMIT TO OWNER.**

See instructions on following sheets for Swing Handle Option instructions.

The keys are fastened to the lock assembly inside the door.

**DO NOT REMOVE THE KEYS FROM THE DOOR UNTIL THE NUMBER PLATE IS INSTALLED AND THE DOOR/KEY NUMBER CHART (Appendix-A) IS COMPLETE.**

The blue adhesive-backed CS Parking label above the door lock handle is optional.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
1. Peel the clear covering from the front of the Number Plate before installing.

2. Clear the flash from the slot (if needed) with a hack saw blade.

3. Slightly deform the number plate so it does not lay flat. This will keep the plate from sliding free of door when it open & closes.

4. Slide the number plate into the slot in the door, making sure the NUMBER FACES the FRONT OF THE DOOR. A hammer handle may be used for better force.

5. Apply silicone adhesive through the open hole (shown by arrow) to the back of the Number Plate.

6. Mark the Door Number on a resealable Plastic Bag and place the keys for that door inside.

7. Collect the keys and keep together with the Door/Key Number Chart (Appendix-A) and submit to owner.

Detach the keys after the doors are installed. Operate the lock using the keys to ensure correct operation.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
Door Installation

Each standard ProPark locker will have (2) active doors. The optional "Fixed Rear Panel" locker is described in later sheets.

The Door Assembly will attach to the Vertical Frame with a total of (5) 5/16" Screws (10219) and Flange Nuts (10304).

2. Locate the (3) Screws (10219) from the Hinge side of the door. The Flange Nuts (10304) will tighten against the Divider Flange.

STEP 1
With the Door in the open position, lift it until there is no gap between the Door and Top Panel. Align the Doors as shown in the following steps.

STEP 1

The Divider Flange will be attached from a previous step with (2) 5/16" Screws (10219) and Flange Nuts (10304). The notches in the Door Hinge will fit over the existing screws. **DO NOT LOOSEN THE DIAGONAL PARTITION FLANGE WHEN INSTALLING THE DOOR.**

1. Open the hinge on both doors as shown below. Align the mounting slots on the hinge with the remaining (3) holes on the Vertical Frame.

With the Door in the open position, lift it until there is no gap between the Door and Top Panel. Align the Doors as shown in the following steps.

2. Locate the (3) Screws (10219) from the Hinge side of the door. The Flange Nuts (10304) will tighten against the Divider Flange.

**ONLY FINGER TIGHTEN the NUTS**

ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
It is important that the Doors, End Panels, and Partitions are attached and snug. Tighten all the fasteners after the Top Panel is attached.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES
WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
Adjust the Door

If the Doors must be re-aligned after the Locker is mounted, the above door installation steps must be followed in reverse order. Square the doors and adjust the latch bar so the door opens and closes smoothly.

5. When the hinge fasteners are loose, lift & rotate the door so the door is straight and parallel with the Top Panel. There should be no gap.

A. Snug the top & bottom Flange Nuts.
B. Bump the door until it is aligned.
C. Tighten all of the Flange Nuts.

When correctly aligned, the door T-Handle should operate smoothly without binding against the frame. The door should not have excessive play or rattle after closing.

6. Using the T-40 Star Drive Bit, adjust the (5) Latch Bar mounting screws until the T-Handle and Latch Bar assembly operates smoothly.

DO NOT OVERTIGHTEN

T-40 Star Drive (10801) bit is included with hardware shipment

ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
The Fixed Rear Panel Door is an OPTION that will be assembled at the factory and installed during Locker completion. It installs the same as the other doors.

This Parts List is for a SINGLE-DOOR Starter Assembly Locker. Fixed Rear Panel Lockers may also be configured as multiple assemblies.

<table>

The interior Diagonal Partition and attachments will not be used with this assembly.

This Locker has only **ONE** active door.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES.
The Fixed Rear Door Panel (10741) will be shipped with the locating tab reversed. Both tabs will need to be correctly mounted at the installation of the door.

Assemble the Fixed Rear Panel as shown on the Door Installation instructions on preceding pages.

1. Hang the Fixed Rear Panel using the 5/16" Screws (10219), Flange Nuts (10304) and Flat Washers (11107).

2. The door panel will have to be closed before it can be fixed in place.

**DO NOT FIX THE DOOR IN PLACE UNTIL THE LOCKER IS SQUARED AND MOUNTED ON THE ANCHOR PLATES.**

Once the Locker is square, close the door and fix in place. You will NOT be able to adjust the door after it is fixed.

3. Remove the Stationary Bracket (10742) from the top & bottom of the door panel. Keep the fasteners.

**YOU WILL NEED TO BE INSIDE THE LOCKER TO FIX THE DOOR PANEL CLOSED.**

4. Place the Stationary Bracket (10742) so it lays over the edge of the door and vertical frame or end panel. Replace the 5/16" Flanged Head Screw (10833).

**WARNING:**
To avoid damaging the SMC plastic parts, only tighten the fasteners "Wrench Snug".

**ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES**
SCOPE:
This instruction will detail how to field install the 10755 Door Brace kit.

When correctly installed, the door brace will provide both rigidity and squareness to the locker assembly.

Note: A Starter Locker kit will include only (1) Lower Door Brace per door.

TO FIELD INSTALL THE DOOR BRACE KIT:

1. Remove only one door at a time to install the Door Brace kit.
   Install and complete one Door Brace kit before removing the second door.

2. The Divider and Divider Flange shall be removed from one end only before installing the door brace kit.

NOTE: Save the fasteners to use when reinstalling the above parts!
**SCOPE:**
This work instruction will describe how to utilize the Interior Door Brace for aligning the verticals.

**TOOLS REQUIRED:**
- 3/8” Drill
- 3/8” Socket Wrench
- 3/8” Open End Wrench

**Step:**
1. Remove the Leveling Plate P/N 10216 from the mounting surface.

2. Place the Interior Door Brace against the End Vertical to re-position the opposite Vertical against opposite end of the Interior Door Brace.

3. Using a 3/8" drill bit, drill (4) holes thru the verticals and Leveling Plates "2-each side" using the holes in the Door Brace as a guide.

4. Use the fasteners provided and bolt into place as shown. {Part #10756}

5. These steps will need to be repeated for the remaining Front Verticals as well as the Back Verticals.
**SCOPE:**

This work instruction will describe how to utilize the Interior Door Brace for placement on a Locker Bank.

**Step:**

1. Install Door Brace as described above in the Rear Door Location for Left Locker as shown.

2. Install Remaining Door Brace as described above in the Front Door Location of the Right Locker as shown.

3. Do not install Door Braces in the Center Lockers as they are only needed to stabilize the End Panels.

**ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES**
Diagonal Partition Ass’y

Please read the instructions completely before beginning.

• The Locker Components may be pre-assembled prior to attaching to the assembly.
• Care should be taken that the components are mounted straight & square.
• Excessive handling may impair the finish of the components.
• The Fixed Rear Panel Locker does not include the Diagonal Partition (10101).
• Only multiple lockers (Starter/Adder) will include the Partition Frame (10101).

1. Insert (3) 5/16” Speed Nuts (10221) into the holes on each Divider Flange (10207).

2. Insert (6) 5/16” Bolts (10219) & (6) 5/16” Flat Washers (10218) into the holes on the Diagonal Partition (10101).

3. Fasten (1) Divider Flange (10207) on opposite ends of the Diagonal Partition (10101) and leave semi-tight.

The Flange/Partition sub-assembly will be tightened in following steps when installed and the locker is squared.

Always observe posted safety guidelines when assembling this product. Always wear safety glasses.
**Single Locker Partition**

The Locker Diagonal Partition will be found in all Starter/Adder Lockers (Except Single Door Access) and will mount to either the End Panel or the Vertical Frame.

It is important that the Locker be held **SQUARE** and **PLUMB** during assembly. The doors and overall assembly will be made level in later steps.

4. Place the End Panels (10960) over the Leveling Plates (10216). Do not fasten to the Leveling Plates.

FOR MULTIPLE UNIT LOCKERS, PLACE THE END PANELS AND ALL OF THE INTERIOR PARTITION ASSEMBLIES (See Below) OVER THE LEVELING PLATES.

5. After the assemblies are placed over the Leveling Plates, stretch a bungee cord, or similar, between the assemblies to keep them from falling over.

**STEP 4**

**END PANEL**

**STEP 5**

**Maintain Locker Square and Plumb in All Directions**

**Insert Screws FROM THIS DIRECTION**

**The DIAGONAL PARTITION will be mounted on each locker unit, except the Single Door Lockers.**

**ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES**
Single Locker Partition

6. Mount the Flange/Partition to the End Panel (10960) using (2) 5/16 Bolts (10219) at each end.
   **OF THE 5 BOLT HOLES, FASTEN ONLY POSITION #2 AND #4.**

7. Raise the wood partition until it is level and the hole patterns align. The measured distance across the corners of the locker must be the same in both directions.

8. Locate the 5/16 Bolts (10219) from the outside flange of the Vertical Support. Tighten 5/16 Flange Nuts (10304). Mount the Divider Flange (10207) on opposite corners of the locker assembly.

When the Diagonal Partition assembly and lockers are dimensionally correct: **TIGHTEN ALL FASTENERS.**

The Partition and End Panel assembly should free stand so the Top Panels and Doors can be located in the following steps. **DO NOT YET FASTEN PANELS TO THE LEVELING PLATES.**

After the Locker frame is made plumb and square, the Diagonal Partition fasteners will hold the system in position. If the fasteners are loosened during the assembly steps, the system will be let out of square. The fasteners may only be removed after the Locker Doors are installed (see following Door install instructions).

**ALWAYS OBSERVE POSTED SAFETY GUIDELINES WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES**
**Multiple Locker Partition**

The Partition/Frame Assembly is used with Adder Units

---

**Step 9**

- Insert (8) 5/16" Carriage Bolts (10208) into the square holes inside the Horizontal Frame (10202). Tighten (8) Flange Nuts (10304) on the outside of the assembly.

---

**Step 10**

- Invert the FRAME ASSEMBLY. Insert (6) 5/16" Bolts (10219) & Flat Washers (10218) into the holes on each Partition (10101). Do Not Tighten.

---

**Step 11**

- Square the assembly. Make sure the Vertical Frames are parallel with the inside edge of the Partition and that the Partition nests in the frame ribs. Check Gap "A" to make sure they are uniform on each side.

---

**Step 12**

- Flip the Frame assembly upright to locate and mount each Partition/Frame.

---

**REPEAT THESE STEPS UNTIL ALL FRAMES ARE ASSEMBLED.**

---

**Always observe posted safety guidelines when assembling this product. Always wear safety glasses.**
Level the Locker Ass’y

1. Fasten the Locker assembly to the Leveling Plate (10216) using (2) Hex Head Sheet Metal Screws (10217) per each Leveling Plate.

The MAXIMUM off-level slope allowed is 1°. The door may not open completely if the slope is too great.

If the slope is too great and the door does not open, the Locker must be raised off the pad using all four leveling plates.

Level the Locker across the Top Panel on both ends. Raise or lower the locker until level AND there is clearance to fully open the door.

2. When the locker is in position, drive two Screws (10217) completely through the front of the End Wall and into the Leveling Plate (10216) at each End Panel corner.

IMPORTANT - The Self-Drilling screws must penetrate the Leveling Plate.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES
WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
Once the Locker(s) are assembled and installed, some simple adjustments may need to be completed.

1. The door handle will pop out when unlocked. If it does not pop, try a second key. If it still does not pop, reach inside the door and press the latch "tab" with a screwdriver. The door handle will pop and the latch should operate.

   Use a spray lubricant to free the handle mechanism. DO NOT USE GRAPHITE.

2. The latch bar should operate freely when the door is closed. If there is a great resistance to latching the door, adjust the latch bar by loosening the (5) mounting screws.

3. When correctly adjusted, the Latch Bar should have a slight drag to the action. The door should not rattle when latched.

4. Peel the backing from the CycleSafe Parking label (10709) and locate it as shown at the top, center of the End Panel.

ALWAYS OBSERVE POSTED SAFETY GUIDELINES
WHEN ASSEMBLING THIS PRODUCT. ALWAYS WEAR SAFETY GLASSES
Coat Hook Installation

The Coat Hook (10790) is an OPTION that will be installed after the locker assembly is completed. One Coat hook per locker.

1. Locate Coat Hooks (10790) on the interior divider. Attach with the hardware included in the package.

2. Align the Coat Hooks (10790) with the top of the divider mount plate.

3. Mount the Coat Hook 8" to 10" [200mm to 250mm] from the edge of the Divider.

Always observe posted safety guidelines when assembling this product. Always wear safety glasses.
WARRANTY AND QUALITY

Buy American Statement

CycleSafe, Inc. is dedicated to supporting the Buy American Act by purchasing and specifying U.S. made components on all of our parking products.

Our parking products (Bicycle Lockers, Bike Shelters and Racks) meet the definition of American made products as a domestic-made product being manufactured in the United States and meets the standards and conformance to the Buy American Act.

All of our raw materials including steel components are sourced in the Midwestern region of the United States and are processed and finished in the state of Michigan.

Quality Mission Statement

CycleSafe, Inc. is dedicated to providing 100% on time delivery of a product that will leave the customer not just satisfied, but delighted.

We use a quality model that is patterned after the Automotive Industry Action Group (AIAG) that provides for Continuous Improvement, Defect Prevention, and the Reduction of Waste in the supply chain. Simply stated, this means that we not only closely document our processes, but also strive to reveal where improvements may be made throughout the way we conduct our business, including our supplier network.

CycleSafe is also dedicated to providing an extended life product using environmentally sustainable manufacturing practices that meet or exceed ISO 14000 environmental standards.

Warranty Statement, Terms and Conditions

Cycle Safe Purchase Terms and Conditions document FM4.1.002 website link: https://cyclesafe.com/resources/ordering/
This is the installation record with corresponding key and door numbers. **SAVE THIS DOCUMENT.** Please complete this record and return to the Locker Owner.

**ALIGN DOOR NUMBERS SO ALL EVEN NUMBERS ARE ON ONE SIDE AND ODD ON THE OTHER.** This allows additional units to be later added.

---

**FILL IN THE DOOR & KEY NUMBERS. KEEP THIS DOCUMENT ON FILE FOR FUTURE USE.**

The numbers shall be recorded at installation and given to the owner.
